

DAC Cartwall : Instant Replay

Many automation programs are great at playing hours of endless music, jingles and commercials - they follow a running order and even handle music-ducking for sweepers and voice-tracks...Most, however, are not very good at handling *spontaneous* elements such as sound effects, DJ drops etc...

DAC Cartwall is an easy-to-use jingle player that offers multiple pages of instant audio buttons (56 per page) ready for quick playback or loading into a dedicated player. It's touch-screen friendly that works at a variety of screen resolutions. It can read APE/ID3 and mAirList tag data - allowing it to work seamlessly with an existing automation system. Audio can be fired in "instant" mode simply by clicking/touching the appropriate button, or, you can load the button into 1 of 3 playback decks. The 4 outputs may be assigned to separate sound devices if you wish. Remote-start via the joystick port is supported.

PRODUCTION RECORDER

Not only can you use DAC Cartwall for jingle/fx playback - but also for recording your phone calls in a quick and simple manner. No more Alt-Tabbing between windows or *another* screen for editing - do it with a single application. Recordings can be edited, trimmed and normalized prior to saving - you can then load it into a player or start it from your mixer.

CUSTOMIZE YOUR GUI

Using MSStyles, you can now alter the look of DAC Cartwall using XP Themes. No longer are you limited to the "battleship grey" Windows Classic layout!

DAC Cartwall is yours for just £15 per computer - whether you're a home user or national radio station, the price (and support) is the same. New features may be added by request and most are a result of a customer's suggestion - so if it's not quite right for you, tell me why and perhaps we can fix it.

Features

DAC Cartwall offers the following features...

- GUI can be skinned using MSStyles
- 56 Instant Audio Buttons per page
- 3 Playback Decks
- Works with a touchscreen for quick-fire use
- Re-sizable window allows for any screen resolution
- Built-in recorder for off-air production or telephone recording
- Drag 'n' drop files from the File Viewer direct to a Playback Deck
- APE/ID3 Artist/Title support
- mAirList data file support (for Artist, Title and CueIn)
- Joystick Interface - start the 3 players from your mixer/button-panel
- Assign the players to any sound device

Sounds great - but at what cost ?

Now just £15 - that's the price "per computer" that you wish to licence the software on. You can also purchase 3 licences for the price of 2 - ideal for multi-studio setups or a laptop/backup machine.

Bulk discounts available : If you need several licences or perhaps a custom feature then get in touch and we can discuss the options available.

The software runs for 30 minutes unless registered – If you wish to unlock the software past this limit, you can purchase on my website using any major credit/debit card via Google Checkout or please contact me for bank transfer details.

This price applies whether you are an RSL, Community or Regional/National station.
